320 Orchardview Ave., Suite Two
Seven Hills, OH 44131

The Autism Spectrum Disorders (known as ASD's) include autism, PDD/NOS, AD/HD, Asperger Syndrome, RAD, OCD, and many other developmental disorders. They affect at least 1 in 150 young children in North America, and also are present in many teens & adults. The number of individuals & families touched by them is on an alarming rise. Traditionally, ASD's have been regarded as behavioral/psychiatric disorders with little hope for improvement. In reality, they are the result of an underlying set of medical problems such as nutritional, immunologic, and toxic issues. This leads to effective treatment, known as biomedical treatment, that offers hope to persons and families affected by ASD's. The American Medical Autism Board and Phillip C. DeMio, MD, provide the first International Conference on biomedical and other techniques for parents and healthcare providers, presented Feb. 20-22, 2009, in Novi, MI/Metro Detroit, by world leaders in these treatments. Join us to learn the state-of-the-art of biomedical and other techniques. **You do not want to miss this exciting conference!**
